Case In Point: outbrain

"We highly recommend Atlantic Metro for growing companies who want good, reliable service and network support." *—Ori Lahav, Co-founder & CTO, outbrain*

The Opportunity:

Headquartered in NY with R&D in Israel, outbrain provides web-based services for ratings and content recommendations for blog posts and news articles. Outbrain required a centrally located datacenter facility provider who could offer security, ample power and bandwidth to support the company's growing global business.

The Solution:

outbrain selected Atlantic Metro for its power, space, network capacity and on-demand network support in NYC.

"The Atlantic Metro team understood the requirements of web-based companies and as a result, provided network solutions based on our company needs," stated Mr. Lahav. "In addition, Atlantic Metro's on-site support is a true value-add for companies like ours that are overseas yet still require on-site technical care."

The Results:

"outbrain is a company that goes above and beyond for its clients and we feel that we have found a provider that does the same for outbrain," continued Mr. Lahav. "The technical team at Atlantic Metro knows what customers require, and then delivers the necessary support in an effective manner."
