

Atlantic Metro delivers enterprise-grade private and hybrid cloud hosting services with 24/7/365 management and support. Our in-house, US-based engineers deliver the project management, cloud architecture, and deployment frameworks you need to make your cloud hosting investment a success.

## Hosted Cloud

Our range of hosted cloud options include:

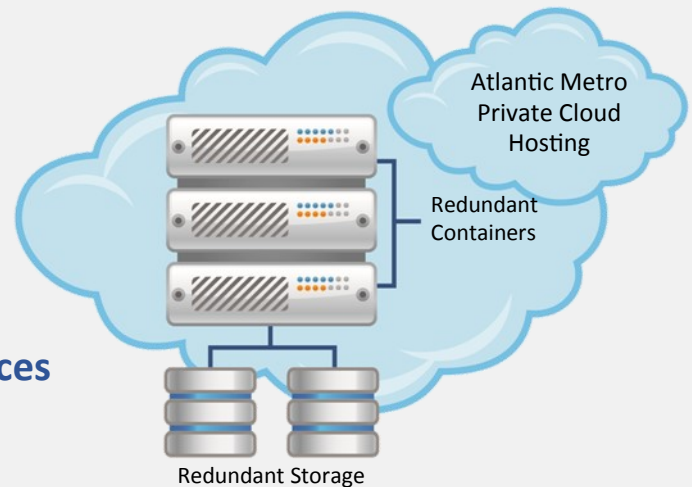

- Virtual Private Data Center
- Virtual Servers
- Bare Metal Servers
- Managed Backups
- Enterprise Storage

## IT Managed Infrastructure Services

Additional add-on managed services to our cloud infrastructure include:

- Migration Assistance
- Managed Security & Compliance Solutions
- Advanced Monitoring & Trending
- Business Continuity & Disaster Recovery

### Flexibility and Scalability

Scale up or down as your business requirements change.

### Reduce Your Capital Expense

Lease only what you need, while setup, configuration, and management is done offsite

### Disaster Recovery & Business Continuity

Ensure your business runs uninterrupted, no matter the circumstances.

### Access Anytime

Get more done, faster, by editing and sharing documents anytime, from anywhere.

### Automatic Updates

Regular software and security updates done for you.

### Increase Security

Store sensitive data in the cloud, not on employee devices.

## Cloud Virtual Private Data Center

Addresses the demands of a new or growing business by providing guaranteed computing resources and on-demand scalability.

Completely virtualize your entire infrastructure - including applications, servers, storage, networks and security.

## Cloud Virtual Servers

Virtualize and move your IT infrastructure into the cloud to gain the power, cost efficiencies, and features of a public cloud, but with the security and performance of a dedicated environment.

Enhance agility, reduce capital and operating expenses, and improve data security, network availability, and application performance.

## Bare Metal Servers

Retain exclusive control of your servers (or have Atlantic Metro's Managed Service Team do it on your behalf).

Bare-metal cloud combines non-virtualized, dedicated servers with the automation of cloud for optimal performance and scale.

### Want to Learn More?

To find out how integrated Cloud Hosting, Colocation, Network Connectivity, and Managed Services can help you achieve bigger business goals and IT initiatives, contact an Atlantic Metro sales representative today.

## Managed Backups & Business Continuity

Atlantic Metro is able to leverage technology alliances with partners such as Veeam and Zerto to deliver seamless integration into your existing environment.

With near-real time replication with Recovery Point Objectives (RPO) ranging from 1 to 24 hours, all of your business applications will be protected from disasters or component failures.
